

冷却液低温循环机

COOLING WATER CIRCULATION MACHINE

产品图片

ZX-LSJ-150

用途特性

冷却液循环机又称低温浴槽，将低温液体外循环。是用压缩机制冷方法的液体循环设备，可直接冷却试管，反应瓶等进行低温下的化学反应，进行化学品和生物制品低温储存，也可结合旋转蒸发器、循环水真空泵、镀膜机、激光器等各种水冷却仪器进行水冷却处理。

Characteristics of uses

The cooling liquid circulation machine is also called the low temperature bath, which can be used in the opening groove of the machine and can also be used in the outside circle. The cooling liquid circulation device using the method of vapor compression refrigeration to cooling liquid circulation apparatus, can be used for direct cooling tube and the reaction bottle for chemical reaction under low temperature, Chemical and biological products stored at low temperature, can also be combined with rotation evaporator, circulating water vacuum. Pump, coating machine, laser and other kinds of water cooling equipment for water cooling treatment.

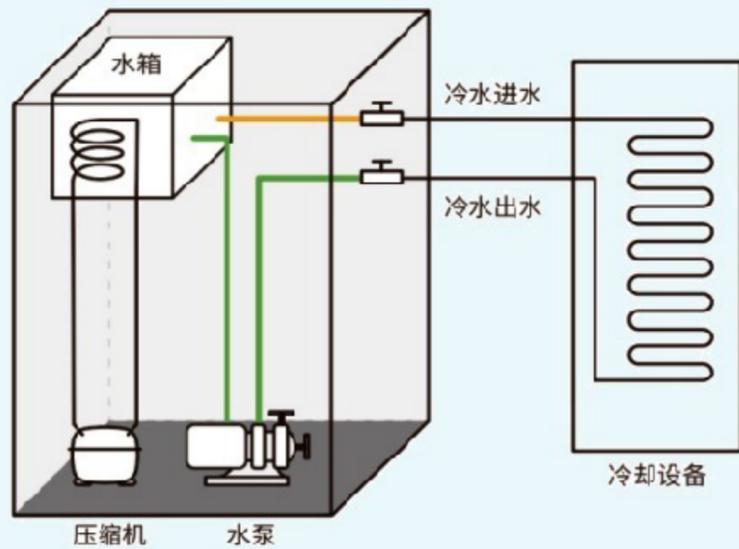

基本参数

型号	参数	控温范围	控温精度	储水量	制冷量W (空载) 蒸发温度15℃时	最大流量 (L/MIN)	最大扬程 (M)	整机外尺寸
ZX-LSJ-150		3-室温	± (1-4) °C	1L	160	16	2.7	230*290*340
